**1/12 Pitch Roof**

4” Double Wall Pipe with a 6” Outer Diameter

0.5” clearance from all sides of pipe to non-combustible roofing material. Combustible materials require 2” clearance from the pipe

---

**How to Use:**

This is 1/4 of the oval you will need to form your entire roof cutout.

- Cut along the dotted line.
- On your template making sheet (cardboard, heavy paper, etc) with a large square ruler, mark a cross at least 12” wide x 12” tall.
- Place the corner of your oval cutout at the center of the cross and trace.
- Flip the oval over 3 times along the axes, tracing on all 4 quadrants to form the complete oval.
- This is the template for cutting the chimney pipe hole in your roof.

---

**IMPORTANT:** Check your scaling. Be sure your printer settings are at 100% (not fitting/shrinking to paper).

**ALWAYS DOUBLE CHECK YOUR MEASUREMENTS!**

**MAKE SURE YOUR BOOT OR FLASHING WILL COVER THE HOLE BEFORE YOU CUT INTO YOUR ROOF**
How to Use:

This is 1/4 of the oval you will need to form your entire roof cutout.

- Cut along the dotted line.
- On your template making sheet (cardboard, heavy paper, etc) with a large square ruler, mark a cross at least 12” wide x 12” tall
- Place the corner of your oval cutout at the center of the cross and trace.
- Flip the oval over 3 times along the axes, tracing on all 4 quadrants to form the complete oval.
- This is the template for cutting the chimney pipe hole in your roof.

2/12 Pitch Roof

4” Double Wall Pipe with a 6” Outer Diameter

0.5” clearance from all sides of pipe to non-combustible roofing material. Combustible materials require 2” clearance from the pipe

IMPORTANT: Check your scaling. Be sure your printer settings are at 100% (not fitting/shrinking to paper)

ALWAYS DOUBLE CHECK YOUR MEASUREMENTS!
