1/12 Pitch Roof

4” Double Wall Pipe with a 6” Outer Diameter

2” clearance from all sides of pipe to roofing material

How to Use:

This is 1/4 of the oval you will need to form your entire roof cutout.

- Cut along the dotted line.
- On your template making sheet (cardboard, heavy paper, etc) with a large square ruler, mark a cross at least 12” wide x 12” tall
- Place the corner of your oval cutout at the center of the cross and trace.
- Flip the oval over 3 times along the axes, tracing on all 4 quadrants to form the complete oval.
- This is the template for cutting the chimney pipe hole in your roof.

ALWAYS DOUBLE CHECK YOUR MEASUREMENTS!

MAKE SURE YOUR BOOT OR FLASHING WILL COVER THE HOLE BEFORE YOU CUT INTO YOUR ROOF
2/12 Pitch Roof

4" Double Wall Pipe with a 6" Outer Diameter

2" clearance from all sides of pipe to roofing material

How to Use:

This is 1/4 of the oval you will need to form your entire roof cutout.

- Cut along the dotted line.
- On your template making sheet (cardboard, heavy paper, etc) with a large square ruler, mark a cross at least 12” wide x 12” tall
- Place the corner of your oval cutout at the center of the cross and trace.
- Flip the oval over 3 times along the axes, tracing on all 4 quadrants to form the complete oval.
- This is the template for cutting the chimney pipe hole in your roof.

ALWAYS DOUBLE CHECK YOUR MEASUREMENTS!

MAKE SURE YOUR BOOT OR FLASHING WILL COVER THE HOLE BEFORE YOU CUT INTO YOUR ROOF

IMPORTANT: Check your scaling. Be sure your printer settings are at 100% (not fitting/shrinking to paper)
3/12 Pitch Roof

4” Double Wall Pipe with a 6” Outer Diameter

2” clearance from all sides of pipe to roofing material

How to Use:

This is 1/4 of the oval you will need to form your entire roof cutout.

- Cut along the dotted line.
- On your template making sheet (cardboard, heavy paper, etc) with a large square ruler, mark a cross at least 12” wide x 12” tall
- Place the corner of your oval cutout at the center of the cross and trace.
- Flip the oval over 3 times along the axes, tracing on all 4 quadrants to form the complete oval.
- This is the template for cutting the chimney pipe hole in your roof.

ALWAYS DOUBLE CHECK YOUR MEASUREMENTS!

MAKE SURE YOUR BOOT OR FLASHING WILL COVER THE HOLE BEFORE YOU CUT INTO YOUR ROOF

IMPORTANT: Check your scaling. Be sure your printer settings are at 100% (not fitting/shrinking to paper)
CHIMNEY PIPE CUT TEMPLATE FOR PITCHED ROOF

4/12 Pitch Roof

4" Double Wall Pipe with a 6" Outer Diameter

2" clearance from all sides of pipe to roofing material

How to Use:

This is 1/4 of the oval you will need to form your entire roof cutout.

· Cut along the dotted line.
· On your template making sheet (cardboard, heavy paper, etc) with a large square ruler, mark a cross at least 12" wide x 12" tall
· Place the corner of your oval cutout at the center of the cross and trace.
· Flip the oval over 3 times along the axes, tracing on all 4 quadrants to form the complete oval.
· This is the template for cutting the chimney pipe hole in your roof.
